Course Overview

In this 5-day course, the professional web developers will learn to develop advanced ASP.NET Core MVC applications using .NET Core tools and technologies. The focus will be on coding activities that enhance the performance and scalability of the Web site application. This course will also prepare the student for exam 70-486.

Who Should Attend

This course is intended for professional web developers who use Microsoft Visual Studio in an individual-based or team-based, small-sized to large development environment. Candidates for this course are interested in developing advanced web applications and want to manage the rendered HTML comprehensively. They want to create websites that separate the user interface, data access, and application logic.

- Describe the Microsoft Web Technologies stack and select an appropriate technology to use to develop any given application.
- Design the architecture and implementation of a web application that will meet a set of functional requirements, user interface requirements, and address business models.
- Configure the pipeline of ASP.NET Core web applications using middleware, and leverage dependency injection across MVC application.
- Add Controllers to an MVC Application to manage user interaction, update - models, and select and return Views.
- Develop a web application that uses the ASP.NET Core routing engine to present friendly URLs and a logical navigation hierarchy to users.
- Create Views in an MVC application that display and edit data and interact with Models and Controllers.
- Create MVC Models and write code that implements business logic within
  - Model methods, properties, and events.
- Connect an ASP.NET Core application to a database using Entity Framework Core.
- Implement a consistent look and feel across an entire MVC web application.
- Write JavaScript code that runs on the client-side and utilizes the jQuery script library to optimize the responsiveness of an MVC web application.
- Add client side packages and configure Task Runners.
- Run unit tests and debugging tools against a web application in Visual Studio 2017.
- Write an MVC application that authenticates and authorizes users to access content securely using Identity.
- Build an MVC application that resists malicious attacks.
- Use caching to accelerate responses to user requests.
- Use SignalR to enable two-way communication between client and server.
- Describe what a Web API is and why developers might add a Web API to an application.
- Describe how to package and deploy an ASP.NET Core MVC web application from a development computer to a web server.

Other Prerequisites

Before attending this course, students must have a minimum of two to three years of experience developing web-based applications by using Microsoft Visual Studio and Microsoft ASP.NET, proficiency in using the .NET Framework, and some familiarity with the C# language.

Course Outline
1 Exploring ASP.NET Core MVC
- Overview of Microsoft Web Technologies
- Overview of ASP.NET 4.x
- Introduction to ASP.NET Core MVC
- Lab: Exploring ASP.NET Core MVC
- Exploring a Razor Pages Application
- Exploring a Web API Application
- Exploring an MVC Application

2 Designing ASP.NET Core MVC Web Applications
- Planning in the Project Design Phase
- Designing Models, Controllers and Views
- Lab: Designing ASP.NET Core MVC Web Applications
- Planning Model Classes
- Planning Controllers
- Planning Views
- Architecting and MVC Web Application

3 Configure Middlewares and Services in ASP.NET Core
- Configuring Middlewares
- Configuring Services
- Lab: Configuring Middleware and Services in ASP.NET Core
- Working with Static Files
- Creating custom middleware
- Using dependency injection
- Injecting a service to a controller

4 Developing Controllers
- Writing Controllers and Actions
- Configuring Routes
- Writing Action Filters
- Lab: Developing Controllers
- Adding controllers and actions to an MVC application
- Configuring routes by using the routing table
- Configuring routes using attributes
- Adding an action filter

5 Developing Views
- Creating Views with Razor Syntax
- Using HTML Helpers and Tag Helpers
- Reusing Code in Views
- Lab: Developing Views
- Adding Views to an MVC Application
- Adding a partial view
- Adding a view component
6 Developing Models
Creating MVC Models
Working with Forms
Validate MVC Application
Lab : Developing Models
Adding a model
Working with Forms
Add Validation

7 Using Entity Framework Core in ASP.NET Core
Introduction to Entity Framework Core
Working with Entity Framework Core
Use Entity Framework Core to connect to Microsoft SQL Server
Lab : Using Entity Framework Core in ASP.NET Core
Adding Entity Framework Core
Use Entity Framework Core to retrieve and store data
Use Entity Framework Core to connect to Microsoft SQL Server

8 Using Layouts, CSS and JavaScript in ASP.NET Core MVC
Using Layouts
Using CSS and JavaScript
Using jQuery
Lab : Using Layouts, CSS and JavaScript in ASP.NET Core
Applying a layout and link views to it
Using CSS
Using JavaScript
Using jQuery

9 Client-Side Development
Applying Styles
Using Task Runners
Responsive design
Lab : Client-Side Development
Use gulp to run tasks
Styling using Sass
Using Bootstrap

10 Testing and Troubleshooting
Testing MVC Applications
Implementing an Exception Handling Strategy
Logging MVC Applications
Lab : Testing and troubleshooting
Testing a Model
Testing a controller using a fake repository
Implementing a repository in MVC project
Add exception handling
Add logging
11 Managing Security
Authentication in ASP.NET Core
Authorization in ASP.NET Core
Defending from Attacks
Lab : Managing Security
Use Identity
Add Authorization
Avoid the Cross-Site Request Forgery Attack

12 Performance and Communication
Implementing a Caching Strategy
Managing State
Two-way communication
Lab : Performance and Communication
Implementing a Caching Strategy
Managing state
Two-Way communication

13 Implementing Web APIs
Introducing Web APIs
Developing a Web API
Calling a Web API
Lab : Implementing Web APIs
Adding Actions and Call Them Using Microsoft Edge
Calling a Web API using server-side code
Calling a Web API using jQuery

14 Hosting and Deployment
On-premise hosting and deployment
Deployment to Microsoft Azure
Microsoft Azure Fundamentals
Lab : Hosting and Deployment
Deploying a Web Application to Microsoft Azure
Upload an Image to Azure Blob Storage
