

# 20486 Developing ASP.NET MVC 5 Web Applications

## Course Overview

[View Course Dates & Register Today](#)

This is a 5-day class

In this 5-day course, the professional web developers will learn to develop advanced ASP.NET Core MVC applications using .NET Core tools and technologies. The focus will be on coding activities that enhance the performance and scalability of the Web site application. This course will also prepare the student for exam 70-486.

## Who Should Attend

This course is intended for professional web developers who use Microsoft Visual Studio in an individual-based or team-based, small-sized to large development environment. Candidates for this course are interested in developing advanced web applications and want to manage the rendered HTML comprehensively. They want to create websites that separate the user interface, data access, and application logic.

## Course Objectives

- Describe the Microsoft Web Technologies stack and select an appropriate technology to use to develop any given application.
- Design the architecture and implementation of a web application that will meet a set of functional requirements, user interface requirements, and address business models.
- Configure the pipeline of ASP.NET Core web applications using middleware, and leverage dependency injection across MVC application.
- Add Controllers to an MVC Application to manage user interaction, update models, and select and return Views.
- Develop a web application that uses the ASP.NET Core routing engine to present friendly URLs and a logical navigation hierarchy to users.
- Create Views in an MVC application that display and edit data and interact with Models and Controllers.
- Create MVC Models and write code that implements business logic within Model methods, properties, and events.
- Connect an ASP.NET Core application to a database using Entity Framework Core.
- Implement a consistent look and feel across an entire MVC web application.
- Write JavaScript code that runs on the client-side and utilizes the jQuery script library to optimize the responsiveness of an MVC web application.
- Add client side packages and configure Task Runners.
- Run unit tests and debugging tools against a web application in Visual Studio 2017.
- Write an MVC application that authenticates and authorizes users to access content securely using Identity.
- Build an MVC application that resists malicious attacks.
- Use caching to accelerate responses to user requests.
- Use SignalR to enable two-way communication between client and server.
- Describe what a Web API is and why developers might add a Web API to an application.
- Describe how to package and deploy an ASP.NET Core MVC web application from a development computer to a web server.

## Other Prerequisites

Before attending this course, students must have a minimum of two to three years of experience developing web-based applications by using Microsoft Visual Studio and Microsoft ASP.NET, proficiency in using the .NET Framework, and some familiarity with the C# language.

## Course Outline

[nhls.com](http://nhls.com)

# 20486 Developing ASP.NET MVC 5 Web Applications

## 1 Exploring ASP.NET Core MVC

Overview of Microsoft Web Technologies  
Overview of ASP.NET 4.x  
Introduction to ASP.NET Core MVC  
Lab : Exploring ASP.NET Core MVC

## 2 Designing ASP.NET Core MVC Web Applications

Planning in the Project Design Phase  
Designing Models, Controllers and Views  
Lab : Designing ASP.NET Core MVC Web Applications

## 3 Configure Middlewares and Services in ASP.NET Core

Configuring Middlewares  
Configuring Services  
Lab : Configuring Middleware and Services in ASP.NET Core

## 4 Developing Controllers

Writing Controllers and Actions  
Configuring Routes  
Writing Action Filters  
Lab : Developing Controllers

## 5 Developing Views

Creating Views with Razor Syntax  
Using HTML Helpers and Tag Helpers  
Reusing Code in Views  
Lab : Developing Views

## 6 Developing Models

Creating MVC Models  
Working with Forms  
Validate MVC Application  
Lab : Developing Models

## 7 Using Entity Framework Core in ASP.NET Core

Introduction to Entity Framework Core  
Working with Entity Framework Core  
Use Entity Framework Core to connect to Microsoft SQL Server  
Lab : Using Entity Framework Core in ASP.NET Core

## 8 Using Layouts, CSS and JavaScript in ASP.NET Core MVC

Using Layouts  
Using CSS and JavaScript  
Using jQuery  
Lab : Using Layouts, CSS and JavaScript in ASP.NET Core

## 9 Client-Side Development

Applying Styles  
Using Task Runners  
Responsive design  
Lab : Client-Side Development

# 20486 Developing ASP.NET MVC 5 Web Applications

## 10 Testing and Troubleshooting

Testing MVC Applications  
Implementing an Exception Handling Strategy  
Logging MVC Applications  
Lab : Testing and troubleshooting

## 11 Managing Security

Authentication in ASP.NET Core  
Authorization in ASP.NET Core  
Defending from Attacks  
Lab : Managing Security  
Use Identity

## 12 Performance and Communication

Implementing a Caching Strategy  
Managing State  
Two-way communication  
Lab : Performance and Communication

## 13 Implementing Web APIs

Introducing Web APIs  
Developing a Web API  
Calling a Web API  
Lab : Implementing Web APIs

## 14 Hosting and Deployment

On-premise hosting and deployment  
Deployment to Microsoft Azure  
Microsoft Azure Fundamentals  
Lab : Hosting and Deployment
