

20334 Core Solutions of Microsoft Skype for Business 2015

Course Overview

This course provides students with the knowledge and skills required to plan, deploy, configure, and administer a Microsoft Skype for Business solution. Students will learn how to deploy a multi-site and highly available Skype for Business infrastructure that supports instant messaging (IM), conferencing, enterprise voice, archiving, and monitoring. Students will also learn how to manage, maintain, and troubleshoot issues in the infrastructure.

This course focuses primarily on the on-premises deployment of Skype for Business but does include information on how to integrate the on-premises deployment with Teams or Skype for Business Online as well as how to migrate from previous versions of Skype for Business Server. This course helps the students prepare for Exam 70-334: Core Solutions of Skype for Business 2015.

Who Should Attend

The primary audience for this course is information technology (IT) professionals who are responsible for the Skype for Business deployment in their organizations. Experience with previous versions is beneficial but not required for students taking this course. Students should be proficient with Active Directory Domain Services (AD DS), data networks, and telecommunications standards and components that support the configuration of Skype for Business. Students should also be familiar with Microsoft Exchange Server and Microsoft 365.

The secondary audience for this course includes IT professionals who are planning to take the exam 70-334: Core Solutions of Skype for Business 2015 as a stand-alone exam or as part of the requirement for the Microsoft Certified Solutions Expert (MCSE): Communications certification exam.

Course Objectives

This is a 5-day class

20334 Core Solutions of Microsoft Skype for Business 2015

After completing this course, students will be able to:

- Describe the architecture of Skype for Business and design a Skype for Business topology.
- Install and implement Skype for Business Server.
- Administer and manage Skype for Business Server by using the various available tools.
- Design and implement clients and users in Skype for Business.
- Implement conferencing in Skype for Business Server.
- Design and implement additional conferencing options.
- Design and implement monitoring and archiving in Skype for Business.
- Design and implement connectivity for external users and organizations.
- Implement Enterprise Voice in Skype for Business Server.
- Plan and implement high availability in Skype for Business.
- Design and implement disaster recovery scenarios for Skype for Business.
- Design and deploy Skype for Business hybrid.
- Plan and implement a migration to Skype for Business Server 2019 or Microsoft Teams.

Course Outline

1 Design and architecture of Skype for Business Server

Overview of Skype for Business components and features
Introduction to the Skype for Business administrative tools

2 Installing and Implementing Skype for Business Server

Server and Service Dependencies
Planning SIP Domains
Installing Skype for Business Server
Integrating Skype for Business Server with Exchange Server and SharePoint Server

3 Administering Skype for Business Server

Skype for Business Server Control Panel
Skype for Business Server Management Shell
Implementing Role-Based Access Control
Using Test Cmdlets
Tools for Troubleshooting Skype for Business

4 Configuring Users and Clients in Skype for Business

Configuring Users
Deploying the Skype for Business Client
The Registration, Sign-In, and Authentication Processes
Configuring Skype for Business Client Policies
Managing the Skype for Business Address Book

20334 Core Solutions of Microsoft Skype for Business 2015

5 Configuring and Implementing Conferencing in Skype for Business

Introduction to Conferencing in Skype for Business
Integrating Skype for Business Server and Office Online Server
Bandwidth Planning
Configuring Conferencing Settings

6 Implementing Additional Conferencing Options in Skype for Business Server

Overview of the Conferencing Life Cycle
Designing and Configuring Audio/Video and Web Conferencing Policies
Deploying Dial-in Conferencing
Configuring Microsoft Teams Rooms
Configuring Large Meetings and Skype Meeting Broadcasts

7 Designing and Implementing Monitoring and Archiving in Skype for Business

Components of the Monitoring Service
Implementing Archiving
Designing an Archiving Policy
Implementing an Archiving Policy

8 Deploying Skype for Business External Access

External Access Overview
Configuring External Access Policies and Security
Configuring External Access Network and Certificates
Configuring Reverse Proxy
Designing Mobility in Skype for Business Server
Designing Federation in Skype for Business Server

9 Implementing Enterprise Voice in Skype for Business Server

Connecting to the PSTN
Configuring Enterprise Voice
Configuring Voice Routing
Assigning Phone Numbers
Configuring Voicemail
Voice Applications

10 Implementing High Availability in Skype for Business

Planning for Front End Pool High Availability
Planning for Back End Server High Availability
High Availability for Other Component Servers

11 Implementing Disaster Recovery in Skype for Business

Disaster Recovery Options in Skype for Business Server
Implementing Disaster Recovery in Skype for Business Server
Additional Disaster Recovery Options in Skype for Business Server

20334 Core Solutions of Microsoft Skype for Business 2015

12 Implementing a Skype for Business Server and Office 365 Hybrid Deployment

Overview of Office 365
Preparing for a Hybrid Deployment
Configuring a Hybrid Skype for Business Environment

13 Planning and Implementing a Migration to Skype for Business Server or Microsoft Teams

Overview of Upgrade and Migration Paths
Migrating to Skype for Business Server 2019
Migrating to Microsoft Teams
In-Place Upgrade to Skype for Business Server 2015
