

Course Overview

This is a 1-day class

In the past, popular thought treated artificial intelligence (AI) as if it were the domain of science fiction or some far-flung future. In the last few years, however, AI has been given a new life. The business world has especially given it renewed interest. However, AI is not just another technology or process for the business to consider—it is a truly disruptive force, one that promises to deliver an entirely new level of results for all aspects of the business. Even organizations that resist adopting AI will feel its impact. If the organization wants to thrive and survive in this transforming business landscape, it will need to harness the power of AI.

Despite its promises, AI can seem like a daunting concept for business professionals. How can you hope to apply AI to your own business if you can't see beyond the vague buzzwords and hype? That's why this course was created: to give you the essential knowledge of AI you'll need to steer the business forward. AIBIZ candidates will learn AI concepts, approaches to machine learning and deep learning, fundamentals of AI implementations, and the impact of AI including business use cases.

This course includes an exam voucher for the AIBIZ exam (exam AIZ-110).

Who Should Attend

This course is primarily designed for managers, business leaders, and other decision-makers who are interested in growing the business by leveraging the power of AI. Other individuals who wish to explore basic AI concepts are also candidates for this course.

Course Outline

1 AI FUNDAMENTALS

AI Concepts
Approaches to Machine Learning and Deep Learning

2 AI IMPLEMENTATIONS

Data Science
Search Engines
Natural Language Processing
Computer Vision
Robotics

3 THE IMPACT OF AI

- Benefits of AI
- Challenges of AI
- Business Use Cases for AI
